Coding

[Personal Portfolio Website](#): This current web app, built with Python and Flask library hosted on AWS

UMich Python 3 Programming (Coursera) recommendation system: Created a recommendation system

UMich Python 3 Programming (Coursera) Image Manipulation: Created an image manipulation app with base Python and OCR tools

UMich Python 3 Programming (Coursera) Joke Generator: made a pun generator matching words from movie titles to funniest jokes on the internet with the same word

UMich Python 3 Programming (Coursera) Wordle-Like Game Solver: Created an application that combines image manipulation tool and string manipulation to solve Wordle-like puzzles

Homepage

Hello all!

My name is Geunyong Son (Korean) and Aung Myin (Burmese) but I also go by Dan, I am doing a part-time MS in Data Science at Johns Hopkins University. I used to work in economic and financial research in the US straight out of college for a couple of years but have relocated back to Asia and right now, I am based in Hong Kong from 2026 to 2028 until the foreseeable future. I am working as a garment salesman but I would like to pivot to more data aligned roles in finance and manufacturing across Asia.

A common theme across all the jobs I've had was sifting through a lot of descriptive data collected from vendors and cleaning said data, mostly specialized for the process in the financial pipeline. A couple of notable projects I've worked on were the Financial Abuse Report from Global Thinking Foundation USA and the 2023 Capital Market FactBook at SIFMA. Now I'd like to try my hands at inferential statistics!

I also tutor math and writing to high school and early college aged students in my spare time and help with college admissions process, specifically for the US system. For my non-professional bio, please refer to [about!](#)

About Me

I am Burmese-Korean mostly based in Hong Kong but I bounce around South Korea, Myanmar, Thailand, and Vietnam a lot. I received my high school diploma from UWCSEA in Singapore but studied at NYU for my bachelor's in Econometrics & Quantitative Economics with accompanying minors in Philosophy and Math in 2021. I planned to return to Asia back right after my bachelor's but an erupting civil war in Myanmar and COVID restrictions changed my plans.

Fortunately, I received an internship with a think tank called Global Thinking Foundation USA which later turned into a job until 2022 when the parent company in Italy faced sudden fiscal constraints due to Russo-Ukraine War and subsequently dissolved its US branch. Afterwards, I received an internship with another think tank called The Conference Board which unfortunately fell apart due to USCIS taking longer than anticipated to process and deliver my work status. Finally, I landed a job at SIFMA with their research department where I worked until 2024. Sensing the winds change, I quit early to relocate back to Asia.

A year later, I received and confirmed my Korean citizenship and renounced my Burmese passport while working in Vietnam. In early 2026, I started revising math again and started learning how to code; I would like to recreate/showcase similar types of things I have worked on back in the US on this website some day :)

In my free time, I am either studying Korean, Chinese, working out, or working through a massive backlog of books that is spilling out of my bookshelf. My myriad of hobbies depend strongly upon the seasons and proximity, ranging from amateur botany, soup making, puzzle solving, to Muay Thai (Lethwei as well!).
